

Spark Cellular IoT/M2M Certified Embedded Modules and Integrated Devices.

Revision Date: October 2022

Listed below are the IoT/M2M, 5G, 4G-LTE Cellular Embedded Modules and Integrated Devices that have been certified for use on the Spark Mobile Network.

The modules in this list have passed Spark's PTC257 Certification Program as meeting Spark's mandatory criteria and guidelines. Spark's guidelines also ensure that New Zealand RSM regulatory and RCM requirements have been met.

The integrated devices/modems in this list are using a Spark certified module. Spark requires all new IoT/M2M cellular capable devices to support 4G-LTE and VoLTE if voice is required.

Spark's primary coverage bands are 4G LTE Band 28 and 3, and 3G WCDMA Band 5, therefore any IoT module or devices must support these three bands as a minimum. All modules and devices certified via Spark's IoT/M2M Certification Program must support remote firmware upgrade capability.

For questions and certification of IoT Devices & Modules, please contact IoTDevices@spark.co.nz
